Handbook Of Waste Management And Co-Product Recovery In Food Processing (Woodhead Publishing Series In Food Science, Technology And Nutrition)

Synopsis

The intensification of agriculture and food production in recent years has led to an increase in the production of food co-products and wastes. Their disposal by incineration or landfill is often expensive as well as environmentally sensitive. Methods to valorise unused co-products and improve the management of wastes that cannot be reused, as well as techniques to reduce the quantity of waste produced in the first place, are increasingly important to the food industry. With its distinguished editor and array of international contributors, *Waste management and co-product recovery in food processing* reviews the latest developments in this area and describes how they can be used to reduce waste. The first section of the book provides a concise introduction to the field with a particular focus on legislation and consumer interests, principle drivers of waste management. Part two addresses the minimisation of biowaste and the optimisation of water and energy use in food processing. The third section covers key technologies for co-product separation and recovery, such as supercritical fluid extraction and membrane filtration, as well as important issues to consider when recovering co-products, such as waste stabilisation and microbiological risk assessment. Part four offers specific examples of waste management and co-product exploitation in particular sectors such as the red meat, poultry, dairy, fish and fruit and vegetable industries. The final part of the book summarises advanced techniques, to dispose of waste products that cannot be reused, and reviews state of the art technologies for wastewater treatment. *Waste management and co-product recovery in food processing* is a vital reference to all those in the food processing industry concerned with waste minimisation, co-product valorisation and end waste management. Looks at the optimisation of manufacturing procedures to decrease waste, energy and water use Explores methods to valorise waste by co-product recovery Considers best practice in different sectors of the food industry

Book Information

Series: Woodhead Publishing Series in Food Science, Technology and Nutrition (Book 1)

Hardcover: 680 pages

Publisher: Woodhead Publishing; 1 edition (April 14, 2007)

Language: English

ISBN-10: 1845690257

ISBN-13: 978-1845690250

Product Dimensions: 6.4 x 1.9 x 9.4 inches

Shipping Weight: 2.6 pounds (View shipping rates and policies)

Best Sellers Rank: #729,667 in Books (See Top 100 in Books) #177 in [Books > Engineering & Transportation > Engineering > Civil & Environmental > Environmental > Waste Management](#) #363 in [Books > Business & Money > Industries > Restaurant & Food](#) #1399 in [Books > Business & Money > Industries > Hospitality, Travel & Tourism](#)

Customer Reviews

This is a most welcome addition to the literature, likely to be essential study material for both technologists and process engineers., The Chemical Engineer – an ideal information source for those intended in managing waste and recovering waste for use in products to produce revenue., Food Science and Technology A welcome addition to the libraries of companies and of academic institutions with an interest in both food processing and environmental matters., International Journal of Dairy Technology

Keith Waldron is Research Leader and Director of the NRP Biorefinery Centre at the Institute of Food Research, UK.
