# **Media And Mixes For Container Grown Plants**

## Synopsis

The past two decades have seen rapid advances in the technology used to produce pot plants. Glasshouses designed and orientated to give maximum light transmission, fully automatic heating and ventilating systems, carbon dioxide enrichment of the atmosphere, controlled photoperiods using automatic blackouts and incandescent lamps which enable plants such as chrysanthemum to be flowered at any time of the year, mist propagation techniques, chemical growth regulators which control the height of plants, automatic watering and feeding systems, etc.: these are only some of the developments which have transformed pot plant culture. There have also been many changes in the composts and systems used to grow the plants. Mineral soils, which formed the basis of the John Innes composts, are now either too expensive or too difficult to obtain in suitable quality and sufficient quantity. Consequently the grower has been forced to seek other materials such as peat, perlite, vermiculite, plastic foam, shredded bark, etc. New types of fertilizers, new methods of heat sterilization and new chemical sterilizing agents are also being used.

## Book Information

Hardcover: 309 pages

Publisher: Springer; 2nd ed. edition (February 29, 1988)

Language: English

ISBN-10: 0046350160

ISBN-13: 978-0046350161

Product Dimensions: 1 x 6.8 x 10 inches

Shipping Weight: 1.6 pounds

Average Customer Review: 5.0 out of 5 stars 1 customer review

Best Sellers Rank: #4,006,758 in Books (See Top 100 in Books) #75 in Books > Crafts, Hobbies & Home > Gardening & Landscape Design > Soil #884 in Books > Crafts, Hobbies & Home > Gardening & Landscape Design > By Technique > Container Gardening #1477 in Books > Science & Math > Agricultural Sciences > Forestry
