Atlas Of Diagnostic Radiology Of The Horse: Diseases Of The Front And Hind Limbs

Synopsis

This radiographic atlas familiarises the equine practitioner with all common and uncommon features of the various bone and joint diseases of the equine limbs. Illustrated with high quality radiographs, the clinical significance of each image is described and defined, and schematic drawings help to observe small obscure details and to summarise "characteristic" lesions. Many new illustrations have been added to this second edition covering all parts of the equine limbs, with emphasis on the various lesions of the foot, fetlock abnormalities and carpal disorders as well as the hock and stifle. The text contains specific case studies and offers clear descriptions of the radiographic or differential diagnosis.
