## Customer Reviews

Fast shipping, exactly as described!

After thoroughly perusing the pages of this textbook, it became clearly that the author, W. W. Hughes, touches on every topic and subtopic associated with the discipline of Environmental Toxicology. Unlike other textbooks dealing with the same scientific discipline, Hughes does not appear to be untalented or unknowerdgable when dealing with the discipline of environmental toxicology. Rather, Hughes shows that he is very knowledgable about this discipline as well as its many subareas and topics. This textbook touches on every area and related subarea of environmental toxicology from organ toxicity and specificty to the finer components of a detailed and scientifically adequate risk assessment. Moreover, the author breaks down the various classes of environmental pesticides for the reader in terms of names, biochemical class, solubility in water, and

their Modes of Actions on terrestrials, aquatic, and invertebrate species. This textbook is a must for any student, instructor, government biologist/chemist/toxicologist, or industrialist desiring a more indepth and perhaps more scientific knowledge about the components which are used in the discipline of environmental toxicology. Hughes makes sure this textbook stands out as an informative science novel from an environmental point of view. It is a must-read textbook that will definitely hold the reader's interest for a long period of time.
