Part One

## THE GENOME LEGACY

A Sci-fi RH Serial  
LUNA WOLF

## Synopsis

Over two-hundred years ago, scientists began splicing the DNA of humans, animals, and insect. Now, theyâ™ve created and nearly perfect human-animal hybrid. To serve the New World Order and their armies. Growing babies in a lab is no longer good enough, however. They want me to be their first ever breeder, to create a race of spliced humans unlike any before them. But is this what Iâ™m supposed to do with my life?\*Reverse Harem\*

## Customer Reviews

This is different than I was expecting, like way different, like 4 black eyes spider spliced man different. The funny part is I'd have passed if that had been in the description (not a fan of spiders) and yet, the author did a great job making it cool instead of creepy. Starting to really like Octavious! This book starts off throwing you right into the action and gives you information as you go and I loved every single page. I wish it wasn't so short. What happened to the ones that had at least a hundred pages. I miss those. I'm getting fed up with these less than 40 pages and wait forever in between each one serials. That being said this one is supposed to release in 21 days and I really liked that this one felt like we accomplished something in it. She passed the test, made headway

with one guy, and met two others, and it ended with her hoping to start her new life tomorrow. All in all a great start to the story and it didn't leave you frustrated that nothing really happened. ;) I won't name names or anything but the book I reviewed right before this was the third in a serial and one I'm getting fed up with. Three books in and very little progression in the story...so frustrating. So, hats off to you author for not doing that and please keep up the good work! I look forward to reading more of your work. Shout out to reverse harems may the love spread far and wide!

I enjoyed this new serial episode so much I've already preordered the second one. It's fast paced and the main character is so shy but completely relatable to me. I'm not sure if there's a trigger warning in the book description, but toward the end, there's a scene that could trigger if you're sensitive. It's not extreme, but personally, I do better if there's a warning. It certainly wouldn't keep me from reading this series.

I was surprised by how quickly I was completely engrossed in the story! DNA splicing & the sci-fi feel are what drew me to this book but the characters/world are what really hooked me in. Plus I can really relate to Velma's introverted shyness so I can't wait to see how or if her character develops.

This was definitely interesting. It's a whole new world where humans have been spliced with other things. We meet all kinds of people in this first book. They seem to be in a lab where they have to pass obstacle course like tests, where if they fail they die, to graduate. You don't get a whole lot of romantic interest in this one, just a little fantasizing, but there's a lot of action going on. Will be picking up the next one to see what this turns in to.

I felt like I was inside one my bizarre dreams while reading through this story. The world building is emmy worthy and leaves you very satisfied. There are lots of twists and turns that were unexpected which make for a great read. This is definitely a young adult fantasy/sci-fi romance with a bit of steam. I'm eagerly awaiting book two.

I downloaded this book with minimal expectations as it only has one review so far. But I was very pleasantly surprised and quite enjoyed it. The concept is interesting to me, as I've read a few sci-fi novels that include DNA splicing or hybrids and quite enjoyed them. So this book, to me, was even more exciting as the author seems to take DNA splicing to a whole new level with more outwardly obvious animal/insect traits as opposed to heightened senses, speed, strength etc. Very intriguing.

Excited for the next part in the serial.

I wish this was longer. :) I want to get to know the characters more, learn what squeaks is going to do and how.

Looks like this is really going to be a good series! I'm intrigued by the skills of the characters and can't wait to find out more!
